

**TECHNOLOGY**

TISOH programs are created and hosted on the advanced Adobe Connect Pro online learning environment. The technology of the platform allows us to deliver rich content in the form of engaging fully-narrated PowerPoint sessions. Online learners will view each lecture similar to a classroom setting with an instructor speaking directly to them, but with a significant added advantage, that of control.

In a live classroom lecture, learners cannot pause, rewind or fast forward to a particular subject slide. But with our online platform, learners have full navigational control, which ultimately enhances their learning experience. The screenshot above is an example of the content interface for a narrated PowerPoint session.

At the bottom, learners have navigational controls for playing, pausing, and scrubbing to an exact point of the lecture by dragging the cursor on the timeline slider. On the right column, thumbnails of each slide in the presentation are displayed for quick access. Outline and Notes tabs are also available to review supplemental content. With this technology, the online learner can relive a classroom experience as many times as desired, ideal for difficult subjects that takes time to grasp fully.
